The sequence contained an ollgo-dT track that was present in the oligonucle-gctide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized testis library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this CDNA sequence: 1-35, >POLY_A#Simple_repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .cr: 319 335 8250

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human potassium channel beta-subunit CC (K+betaM2) proteins and polynucleokides encoding such proteins. The CK+betaM2 sequences are useful for diagnosing, treating and/or preventing CC reproductive disorders, neural disorders, disorders related to aberrant CC potassium regulation or hyper potassium channel activity, metabolic CC disorders (e.g. premature pubsetty), endocrine disorders (e.g. aberrant CC growth hormone synthesis and/or secretion), memory disorder, disorders (e.g. spermature pubsetty), endocrine disorders (e.g. aberrant to condition related to aberrant thyroid hormone release, renal disease or disorders (e.g. comphritis), disorders related to aberrant higher brain function (e.g. CC learning deficiencies), neurodegenerative diseases or disorders (e.g. asrhma). CC They may be used to modulate haemostatic or thrombolytic activity, to cc diseases, wounds, autoimmune diseases or disorders, blood platelet diseases, wounds, autoimmune diseases, disorders sethma), organ rejection cor graft-versus-host disease, and hyperproliferative diseases. K+betaM2 CCM, k+betaM2 cDNA.

These were isolated from expressed sequences tags (ESTm). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. rhexitson's disease. The present sequence is a coding sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tang YT, Liu C, Zhou P, Asundi V, Zhang J,

The present invention relates to human potassium channel beta-subunit (K+betaM2) proteins and polynucleotides encoding such proteins. The CC (K+betaM2) exquences are useful for diagnosing, treating and/or preventing the conductive disorders, neural disorders, disorders related to aberrant potassium regulation or hyper potassium channel activity, metabolic condisorders (e.g. premature puberty), endocrine disorders (e.g. aberrant cycleotion endocrine disorders disorders (e.g. premature puberty), neuroendocrine condition related condition related to aberrant thyroid hormone spermatogenesis), neuroendocrine condition related condernant thyroid hormone release, renal disease or disorders (e.g. capanitis), disorders related to aberrant higher brain function (e.g. capanitis), disorders related to aberrant higher brain function (e.g. capanitis), disorders related to aberrant thyreid muscle tone or excitability (e.g. Alzheimer's condition proliferative disorders (e.g. carcinoid tumour) and disorders (e.g. disease), proliferative disorders (e.g. carcinoid tumour) and disorders conducted to modulate haemostatic or thrombolytic activity, to the property of the provent blood coagulation diseases or disorders, blood platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

K+betaM2 sequences are also used in gene therapy. The present sequence is human BAC AC008652 exon used to isolate K+betaM2 cDNA. This sequence is used in the exemplification of the invention.

Sequences ABB10991-ABB12330 represent 1350 novel human polypeptides, and CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The CC invention also relates to vectors and recombinant host cells comprising a cC nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of iderecting the nucleotides or polypeptides in a sample, and methods of ideritiying compounds which to polypeptides of the invention have homology to known proteins, thereby cC giving an insight into their probable biological activities, and hence cc polypeptides of the invention have homology to known proteins, thereby can activities, including cyrokine, cell proliferation or cell differentiation activities; stem cell growth factor activity; immunomodulatory activity; activin or inhibin related activities; chemotactic or chemokinetic activities; tissue growth activities; or may be conditions, e.g., by protein or gene therapy. Such conditions or cell conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoiethy, achievacers (e.g., myeloid or lymphoid cell conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoiethy activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoiethy activities, polypeptides and nucleotides of the inventions and conditions or architish), protein or gene therapy. Such conditions architish, concerned the such conditions of a chivity and activities and and annormal conditions or activities and unlease.

CC archaers (e.g., of burns, incisions and ulcers), while those with the such to be activitied to conditions or activity may be used to promo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ******************
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           haematopoiesis regulation; tissue growth; immunomodulator; activin; inhibin; chemotaxis; chemotinesis; thrombolysis; oncogenesis; proliferation; metastasis; cancer; tumour; haematopoietic disorder; proliferation; proliferation; proliferation; proliferative; asthma, arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia; bone disorder; osteoporosis; vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder; cell culture; drug screening; gene therapy; antianteriosclerotic; antiasthmatic; antiarthritic; haemostatic; antiarteriosclerotic; cytostatic; osteopathic; vasotropic; cardiant; virucide; antibacterial; antifungal; vulnerary; antiulcer; ss.

                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel nucleic acids encoding novel human foetal CC antigens. The nucleic acids and proteins are used to prevent, treat (e.g. by gene therapy) or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They CC are also used in diagnosing a pathological condition or susceptibility CC to a pathological condition. The antibodies to the antigens can also CC be used in alleviating symptoms associated with the disorders and in CC diagnostic immunoassays e.g. radioimmunoassays or enzyme linked imclude autoimmune diseases, in pisorders which are diagnosed or treated CC include autoimmune diseases e.g. repulated arthitis, hyperpoliferative disorders e.g. repulated arthitis, CC typerpoliferative disorders e.g. repulated arthitis, CC ardiovascular disorders e.g. repulated arthitis, CC and ocular disorders e.g. cardiac arrest, cerebrovascular disorders (e.g. cerebral infections caused by bacteria, viruses and funging CC and ocular disorders e.g. corneal infection. The polypeptides can also CC prevent skin aging due to sumburn, to maintain organs before CC transplantation, for supporting cell culture of primary tissues, to CC as a food additive or preservative to increase can also be used CC as a food additive or preservative to increase can also be used CC apabilities, fat content, lipid, protein, carbohydrate, vitamins, CC minerals, cofactors and disorders treated by the nucleic acids and CC examples of diseases and disorders treated by the nucleic acids and CC examples of diseases and disorders treated by the nucleic acids and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAD49513 standard; cDNA;
       The invention relates to human transporters and ion channels (TRICH) polypeptides and mucleic acid molecules according such polypeptides. TRICH proteins are useful for preparing compositions for diagnosing of treating treating compositions for changes of conditions associated with decreased expression or overexpression of functional TRICH e.g. atherosclerosis or cancer invention is useful in gene therapy. The present sequence is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc contiguous residues of (a); (d) sequences that hybridize to (a), under cc domestic stringent conditions; (e) sequences having at least 75% or 90% cidentity to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and can tigen presenting cells expressing the polypeptide are useful in creating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid polynucleotides can be used as probes or primers for nucleic acid polynucleotides can be used as probes or primers for nucleic acid in this ting expression, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the unour cells, in vaccines and for gene therapy.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO can at ftp.wipo.int/pub/published_pct_sequences.

CC any of a group of over 4000 nucleotide (1) comprising: (a) (C) any of a group of over 4000 nucleotide sequences (ABV99628-ABV99145); (C) by complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under CC contiguous residues of (a); (d) sequences that hybridize to (a), under CC contiguous residues of (a); (d) sequences that hybridize to (a), under CC (ABF6859-ABF6863) encoded by (1) and oligonucleotide can be used to CC detect cancer in a patient and compositions comprising polypeptides, CC polynucleotides, antibodies, fusion proteins, T cell populations and CC antigen presenting cells expressing the polypeptide are useful in CC treating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid chybridisation, in the design and preparation of ribozyme molecules for CC inhibiting expression of the tumour polypeptides and proteins in the CC uncer: The sequence data for this patent did not form part of the printed concer: The sequence data for this patent did not form part of the printed concer: The sequence data for this patent did not form part of the printed concert in the concert of the printed concert of th

The human potassium beta subunit polynucleotide or polypoptide is useful for diagnosing, preventing, treating or ameliorating a pathological condition such as gastrointestinal, reproductive, neural sleep, cardiovascular or pulmonary disorders, a disorder related to hyperpotassium channel activity, an immune disorder related to aberrant NF-kB activity, pineal gland associated disorders, migraine headaches, disorders associated with aberrant melatonin synthesis and/or release or with low DNA repair capacities or low free-radical buffering capacity, delayed sleep phase syndrome, aberrations in circadian cycle, mammary cancer tumourigenesis, age related disorders associated with decreased melatonin secretion, or cancer. This polynucleotide sequence represents the cDNA encoding the potassium channel beta subunit (K-betaM6) protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotide encoding human potassium channel beta subunit polypeptide, useful for diagnosing, preventing, treating or ameliorating e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2052 BP; 380 A; 640 C; 607 G; 425 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Fig 1; 332pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-FEB-2001; 2001US-270132P.

            This invention describes a novel method for determining the degree of comethylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridized to two classes, each with at least one completely of the degree of hybridized to tho classes is determined from the call on the amplicon. From the ratio of labels hybridized to the two classes is determined from the condition of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory conditions of sufferentiation of religion condition of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide collour particularly by detecting mutation. The method allows the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CDNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligoners and the degree of hybridiseation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligoners, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. Abg013410-Abg054121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in cut the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

This invention describes a novel method for determining the degree of commethylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide nucleic acid (PNA) oligomers and the degree of hybridisea to two classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. Amagolation-Amagolatiz represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in cyclosine methylation described in the described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC methylation of a particular cytosine in a motif 5. Cpg-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide nucleic acid (PNA) oligoners CC member, of oligonucleotides and/or peptide nucleic acid (PNA) oligoners CC and the degree of hybridiseation to both classes is determined from the CL label on the amplicon. From the ratio of labels hybridised to the two classes of oligoners, the degree of methylation is calculated. The method CC is used: (i) for diagnosis and/or prognosis of side effects of cherapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

CC Ampliance of the invention of the sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             á
                            This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligoners and the degree of hybridised to two classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two classes of classes of oligoners, the degree of methylation is calculated. The method CC classes of oligoners, the degree of methylation is calculated. The method CC is used; (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mucations or single nucleotide comply and (ii) for differentiation of cell or tissue comply and continuestigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. Associated for determining the degree of cytosine methylation described in cc check of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA \, -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism; SNP; cell differentiation; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Oligonucleotide for detecting cytosine methylation SEQ ID NO 27247.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             12-JUL-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-SEP-2000; 2000DE-1043826.
